Specification

The abstract of the disclosure is objected to because the abstract should be in the form of a single paragraph of no more than 150 words. Correction is required. See MPEP § 608.01(b).

Claim Objections

Claims 4-10 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by the article by W.A. Heinemann. Heinemann teaches, on page 29-30 and figure 5 for example, when describing twin roll atomization, that an arrangement for forming metal flakes is known where molten metal is dispensed from a nozzle onto cooling rolls, one of which is arranged at a different height and whose axis is out of parallelism (see page 30, 1st paragraph), where the roll gap (up to 0.5 mm, or 500 microns, is larger than the thickness of the metal bodies (200 microns, see Table 1 on page 29 for example), thereby showing all aspects of the above claims.

Art Unit: 1742

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Both of Maringer and Japanese'007 are also cited as further examples of prior art metal flake formation devices.
